

Engagement Benefits

- A fully operational Data Guard product deployment for your Oracle platform of choice
- Identify and mitigate key risks and issues associated with the adoption of Data Guard
- Skills transfer from our proven consultants to internal resources

Oracle 10g Data Guard, is a powerful and flexible database availability technology that is designed to protect your critical data from user errors and corruption whilst providing a disaster recovery and highly available database solution. Our Data Guard Deployment engagement is designed to take you through the technical considerations of your Data Guard implementation to deliver the correct solution that addresses your data protection and availability requirements.

Understanding Requirements

The engagement is typically a fixed term 5 day activity. The engagement starts with a simple review of your existing availability and data protection policies and requirements.

Engagement Approach

We then partner with your application designers, systems and database administrators to identify the optimal implementation approach for your environment, always taking into consideration your existing policies or business requirements.

Utilising Oracle best practices and industry proven methodologies will eliminate potential IT barriers in creating a stable foundation for the implementation of 10g Data Guard. The scope of the engagement includes:

Providing an optimal reference design of 10g Data Guard that can serve a fundamental building block in the widespread adoption of Data Guard in your organisation

Mentoring and guiding your resources on the installation, configuration and management techniques for 10g Data Guard

Identifying the optimal approach for ongoing operating, maintenance and administration of your 10g Data Guard implementation

Engagement Benefits

Our experience with Data Guard in a variety of customer engagements with varying technical and business requirements enables our consultants to deliver:

A certified and professional Data Guard implementation based on proven industry experiences

A low risk and rapid implementation using previously tried and tested methods and tools

Access to highly experience Data Guard professionals for skills transfer into your own technical teams

Supporting Framework

In addition to industry proven consultants with extensive Data Guard experience, the engagement enables you to capitalise on the strength and maturity of the Oracle product set and tools specific to Data Guard including:

Platform specific pre-requisites

Data Guard implementation plan and task list

Early adoption of Data Guard requirements and best practices

Validation of the configuration through our TPC-C benchmark toolset: Orastress!

The high performance application people. Our customers go faster

The Linxcel Advantage

This engagement helps you design and deliver a certified and support Data Guard implementation which addresses your business and technical required directly into your technology infrastructure swiftly and at low risk, enabling you to maximise the available benefits that Data Guard provides.

As Oracle partners and authors of "High Performance Oracle", published by Wiley our Oracle specialists are industry proven professionals with a track record in delivery.
